

Write a paragraph explaining what we discovered either (1) through the activity and discussion of commutativity and matrix multiplication, or (2) through the activity and discussion of matrix powers. A good paragraph will:

1. state the conclusions we came to,
2. give examples to illustrate each conclusions,
3. and use principles of good expository writing.

A very good paragraph with also show some depth of inquiry, e.g. asking questions or making conjectures about possible generalizations.
