

**Example 4.** In each of the two parts below, you are given a function  $f$  and are shown two transformations,  $g$  and  $h$ , of  $f$ . Describe in words how  $g$  is obtained from  $f$ , and how  $h$  is obtained from  $g$ , and then find formulas for  $g$  and  $h$ . Check your answers either using a graphing calculator or by plotting test points.

(a)

(b)

## Examples and Exercises

---

1. Write formulas for each of the following transformations of the function  $q(p) = p^2 - p + 1$ .

(a)  $q(p - 1)$

(b)  $q(p) - 1$

(c)  $-2q(-p)$
